

O W L

YOU CAN'T PROTECT WHAT YOU CAN'T SEE

Lowest total cost for coverage of critical sites

Digital radar for large-area, real-time surveillance

Layered security approach for deterrence and response

Automated 24/7 monitoring in all weather conditions

Target classification for focus on real threats

Super fast data updates for accuracy and reliability

Easy integration with a range of security systems

Threat information sent when and where needed

Observation Without Limits™

Observation without limits. It's more than the name of a company. It defines the enriched awareness we offer our customers who operate in a world of ever-present threats. O.W.L.'s job is to innovate technology solutions that enhance the security, safety, and efficiency of customers' critical sites.

O.W.L.

In nature, Owls represent wisdom, power, beauty, and an innate knowing. They are silent predators, capable of flying just inches from their prey without being detected. With binocular vision and binaural hearing, owls are some of the most effective hunters in the world.

Our mission is to bring you peace-of-mind.

Observation Without Limits uses the highest in technical security, surveillance, and reconnaissance to provide critical awareness and peace-of-mind, and delivers quality solutions to the people we serve.

GroundAware

Currently, O.W.L.'s portfolio of solutions features GroundAware®, a powerful, open-architecture surveillance sensor and information platform for today's comprehensive layered security. GroundAware offers an event-based security approach that monitors critical sites 24/7, in real-time, and in all-weather. GroundAware's customizable surveillance sensor and information platform allows users to detect and track intrusion events as they occur. Users are then given instantaneous next steps for verification, deterrence, and interdiction of intruders.

Foundation of excellence

O.W.L. is a commercially focused company formed by Dynetics — an employee-owned and privately-held company that provides responsive, cost-effective engineering, scientific, and IT solutions for national security, cybersecurity, space, and critical infrastructure security sectors. Dynetics has been serving the complex technical needs of the defense, aerospace, and intelligence sectors with radar and other advanced technologies for more than 40 years. Visit www.dynetics.com for more details.
